# 4Cabling 300mm Wide Cable Tray Suitable for 42RU Server Rack | 2 Pack

Cable trays are used to hold up and distribute cables. The perforated tray provides maximum airflow around the cables, and also help to secure them with cable ties. The tray is easily joined to additional lengths or its fittings with taper folded edges which allow it to be slid together smoothly, and then fastened through the holes in the base.

Vertical cable trays are to be installed on the side horizontal support bars and are designed to assist in fixed cable management.

## FEATURES

- Made from Galvanised Steel
- Perforated tray allows for airflow, cooling cables
- Length: 1870mm
- Width: 300mm
- Depth: 10mm
- Suitable for 42RU Rack
